FOR
INSTANT CLEANING
RESULTS

A highly alkaline detergent that quickly penetrates heavy oils, caked-on grease, sludge and other extreme soil conditions. Formulated to prevent lime build-up in coils or steam cleaning equipment. Excellent for use in Steam Jennies, pressure washers, automatic scrubbers or manual operations.

DIRECTIONS FOR USES:

This product may be used with Steam Jennies or pressure washers. Place the concentrated liquid in the machine's dispensing container. Many pressure washers have a preset dispensing ratio. Most cleaning jobs can easily be accomplished with a 1:40 dilution (3 oz./gallon of water). If extremely soiled set dilution at 1:25 (5 oz./gallon of water).

Select the correct nozzle for the pressure washer. For example, a 65° nozzle will fan the liquid and is excellent for cleaning large areas. A 10° nozzle will direct a solid stream which quickly breaks up grime. A 25° nozzle works well as an all-purpose cleaning nozzle. For best results, hold the wand at right angles to the surface to be cleaned. For vertical surfaces, clean from the bottom up and rinse from the top down. This will eliminate streaking.

For cleaning concrete floors: Wet area thoroughly with water and apply diluted product on floor. Allow to stand for 10 minutes, agitate with brush if necessary. Rinse thoroughly. For use with automatic scrubber, dilute 1:40 (3 oz./gallon of water).

SPECIFICATIONS:

Appearance.....	Green/yellow liquid
Odor.....	Characteristic odor
pH.....	13.0
Specific Gravity.....	1.070
Flash Point.....	None to boiling
Boiling Point.....	Appx. 212°F
Water Solubility.....	Complete
